

# CS50 - SECTION 8

11/06/18

# POST-MORTEM ON PSET 7

# QUICK REMINDERS

1. What's the difference between the client-side and server-side?

# QUICK REMINDERS

1. What's the difference between the client-side and server-side?

**Server-side deals with code run on the server, whereas client-side refers to code downloaded and run locally on the user's computer.**

# QUICK REMINDERS

1. What's the difference between the client-side and server-side?

**For the purposes of validation, we used JS in PS7 to achieve client-side validation. JS wouldn't even let the user submit the form if they had entered incorrect form input.**

**You used Flask and Python to achieve client-side validation. An error was returned to the user if they submitted incorrect form input.**

# QUICK REMINDERS

1. What's the difference between the client-side and server-side?

**Client-side validation is about immediate user feedback, whereas server-side validation is about data integrity.**

# QUICK REMINDERS

2. One quick way to improve the design of your programs is to identify common “bottlenecks” in processing speed.

# QUICK REMINDERS

2. One quick way to improve the design of your programs is to identify common “bottlenecks” in processing speed.

**For example, in PS7, there were multiple ways to iterate over the `lines` of the input. It was possible to do this with one `for` loop instead of nested `for` loops. Nested `for` loops dramatically increase the running time of our program.**

# QUICK REMINDERS

# MOVING BEYOND THE CSV FILE

# MOVING BEYOND THE CSV FILE

## RELATIONAL VS. NON-RELATIONAL DATABASES

A non-relational database does not incorporate the table model. Instead, data can be stored in a single document file.

A relational database table organizes structured data fields into defined columns.

# MOVING BEYOND THE CSV FILE

# SQL

# DATABASE DESIGN PRINCIPLES

- Why do we use types when designing our databases?

# DATABASE DESIGN PRINCIPLES

- Why do we use types when designing our databases?

**They allow us to increase the efficiency of data storage/retrieval AND they improve data integrity.**

# DATABASE DESIGN PRINCIPLES

- Why do we use types when designing our databases?

A - Atomicity

All or Nothing Transactions

C - Consistency

Guarantees Committed Transaction State

I - Isolation

Transactions are Independent

D - Durability

Committed Data is Never Lost

(c) <http://blog.sqlauthority.com>

# RELATIONAL DATABASE TERMINOLOGY

- **Database** - One discrete data system; The largest structure we'll be working with

# RELATIONAL DATABASE TERMINOLOGY

- **Database** - One discrete data system; The largest structure we'll be working with
- **Table** - A set of data contained inside a database; Consists of columns and rows

# RELATIONAL DATABASE TERMINOLOGY

- **Database** - One discrete data system; The largest structure we'll be working with
- **Table** - A set of data contained inside a database; Consists of columns and rows
- **Record** - One individual set of fields in the database (i.e. a single row)

# RELATIONAL DATABASE TERMINOLOGY

- **Database** - One discrete data system; The largest structure we'll be working with
- **Table** - A set of data contained inside a database; Consists of columns and rows
- **Record** - One individual set of fields in the database (i.e. a single row)
- **Key** - A field in a table used to retrieve records (*more later*)

# RELATIONAL DATABASE TERMINOLOGY

- **Database** - One discrete data system; The largest structure we'll be working with
- **Table** - A set of data contained inside a database; Consists of columns and rows
- **Record** - One individual set of fields in the database (i.e. a single row)
- **Key** - A field in a table used to retrieve records (*more later*)
- **Schema** - A representation of the underlying structure behind the database; Serves as a template of the database

# KEYS AND SQL

- Keys are just a way to retrieve records from our tables
- They should be unique *within* the table
  - Example: You have an `employee` table. What types of keys could you use to identify your records?

# KEYS AND SQL

- Keys are just a way to retrieve records from our tables
- They should be unique *within* the table
  - Example: You have an `employee` table. What types of keys could you use to identify your records?
    - **An employee ID**
    - **Driver's license number**
    - **A full legal name (possibly—often causes conflicts!)**

# KEYS AND SQL

- There are many different types of keys (we use **primary keys** in CS50):

# STRUCTURED QUERY LANGUAGE (SQL)

- We'll be working with SQL using the **CRUD** paradigm:
  - **Create** new databases, tables, and records
  - **Read** existing records from the database
  - **Update** records and database schema
  - **Delete** records or database schema

# STRUCTURED QUERY LANGUAGE (SQL)

- The primary commands you'll be using in CS50 for PS8:
  - **UPDATE:** Updates records and database schema
  - **INSERT INTO:** Inserts values into a table
  - **SELECT:** Selects values from a table
  - **DELETE:** Deletes records from a table

# STRUCTURED QUERY LANGUAGE (SQL)

- SQL is the underlying language that standardizes how we run statements to implement the CRUD paradigm
  - There exists many different **database engines** that allow us to execute SQL
  - We utilize SQLite in CS50, but an extremely popular alternative is MySQL
- We also have access to a tool called **php1iteadmin** to give us a graphical user interface (GUI) for running different SQL commands

# STRUCTURED QUERY LANGUAGE (SQL)

## SQL Cheat Sheet

**SQL CHEAT SHEET** <http://www.sqltutorial.org>

**QUERYING DATA FROM A TABLE**  
**SELECT c1, c2 FROM t**  
Query data in columns c1, c2 from a table  
  
**SELECT \* FROM t**  
Query all rows and columns from a table  
  
**SELECT c1, c2 FROM t WHERE condition**  
Query data and filter rows with a condition  
  
**SELECT DISTINCT c1 FROM t WHERE condition**  
Query distinct rows from a table  
  
**SELECT c1, c2 FROM t ORDER BY c1 ASC (DESC);**  
Sort the result set in ascending or descending order  
  
**SELECT c1, c2 FROM t LIMIT n OFFSET offset**  
Skip offset of rows and return the next n rows  
  
**SELECT c1, aggregate(c2) FROM t GROUP BY c1**  
Group rows using an aggregate function  
  
**SELECT c1, aggregate(c2) FROM t GROUP BY c1 HAVING condition**  
Filter groups using HAVING clause

**QUERYING FROM MULTIPLE TABLES**  
**SELECT c1, c2 FROM t1 INNER JOIN t2 ON condition**  
Inner join t1 and t2  
  
**SELECT c1, c2 FROM t1 LEFT JOIN t2 ON condition**  
Left join t1 and t2  
  
**SELECT c1, c2 FROM t1 RIGHT JOIN t2 ON condition**  
Right join t1 and t2  
  
**SELECT c1, c2 FROM t1 FULL OUTER JOIN t2 ON condition**  
Perform full outer join  
  
**SELECT c1, c2 FROM t1 CROSS JOIN t2**  
Produce a Cartesian product of rows in tables  
Another way to perform cross join  
  
**SELECT c1, c2 FROM t1 A INNER JOIN t2 B ON condition**  
Join t1 to itself using INNER JOIN clause

**USING SQL OPERATORS**  
**SELECT c1, c2 FROM t1 UNION (ALL) SELECT c1, c2 FROM t2**  
Combine rows from two queries  
  
**SELECT c1, c2 FROM t1 INTERSECT SELECT c1, c2 FROM t2**  
Return the intersection of two queries  
  
**SELECT c1, c2 FROM t1 MINUS SELECT c1, c2 FROM t2**  
Subtract a result set from another result set  
  
**SELECT c1, c2 FROM t1 WHERE c1 (NOT) LIKE pattern**  
Query rows using pattern matching % \_  
  
**SELECT c1, c2 FROM t WHERE c1 (NOT) IN value\_list**  
Query rows in a list  
  
**SELECT c1, c2 FROM t WHERE c1 BETWEEN low AND high**  
Query rows between two values  
  
**SELECT c1, c2 FROM t WHERE c1 IS (NOT) NULL**  
Check if values in a table is NULL or not

## sqlite3 Cheat Sheet

**Cheatography** **sqlite3 Cheat Sheet**  
by Richard Holloway (richardjh) via [cheatography.com/478/cs/370/](http://cheatography.com/478/cs/370/)

**sqlite3 Meta Commands**  
**.backup ?DB? FILE**  
Backup DB (default "main") to FILE  
  
**.bail ON/OFF**  
Stop after hitting an error. Default OFF  
  
**.databases**  
List names and files of attached databases  
  
**.dump ?TABLE? ...**  
Dump the database in an SQL text format.  
  
**.echo ON/OFF**  
Turn command echo on or off  
  
**.exit**  
Exit this program  
  
**.explain ?ON/OFF?**  
Turn output mode suitable for EXPLAIN on or off.  
  
**header(s) ON/OFF**  
Turn display of headers on or off

**sqlite3 Meta Commands (cont)**  
**.output stdout**  
Send output to the screen  
  
**.prompt MAIN CONTINUE**  
Replace the standard prompts  
  
**.quit**  
Exit this program  
  
**.read FILENAME**  
Execute SQL in FILENAME  
  
**.restore ?DB? FILE**  
Restore content of DB (default "main") from FILE  
  
**sqlite3 Meta Commands cont.**  
**.schema ?TABLE?**  
Show the CREATE statements  
  
**separator STRING**  
Change separator used by output mode and .import

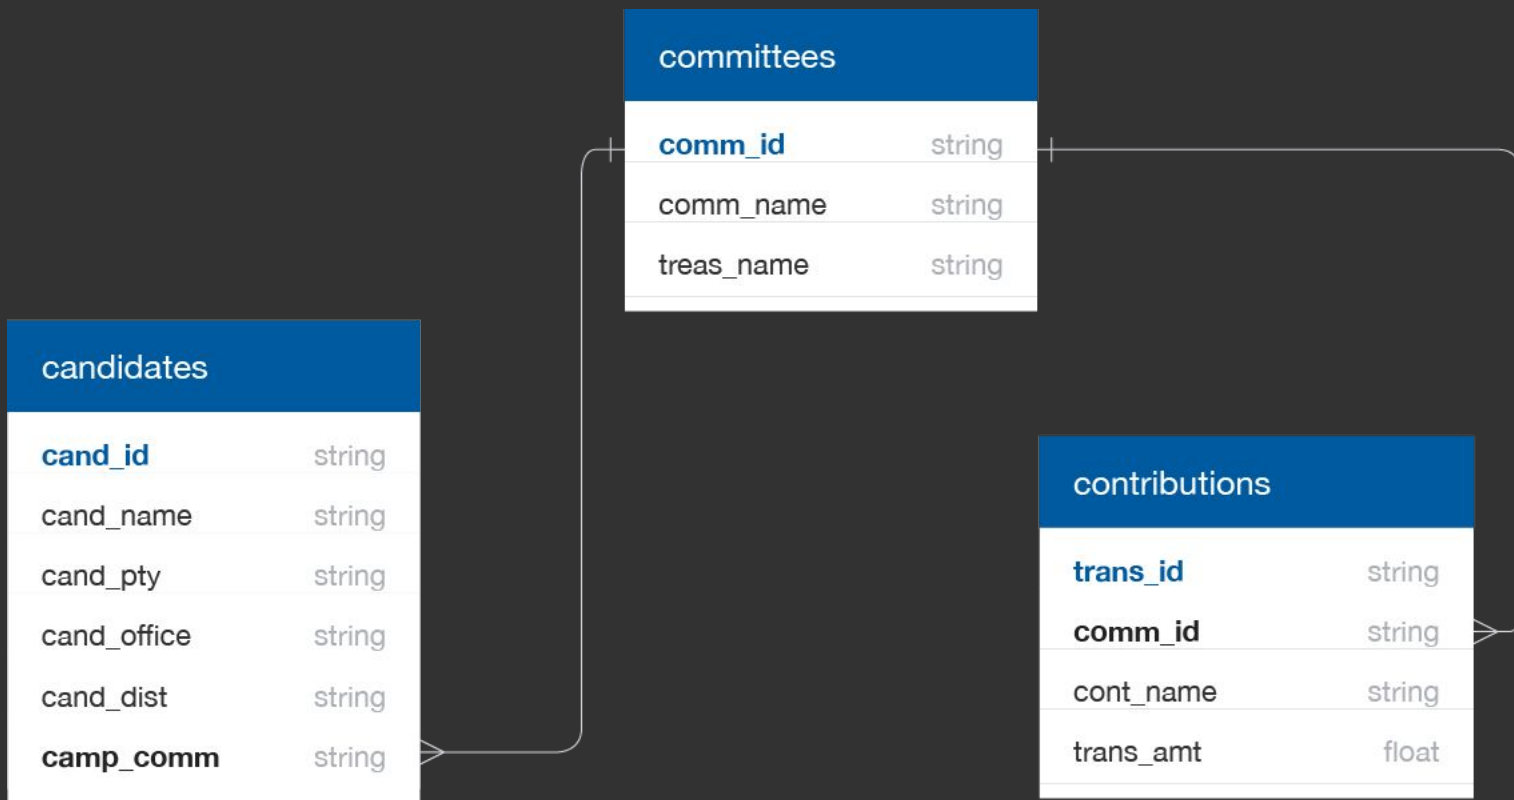

**sqlite3 Options**  
**-init file**  
Read and execute commands from file, which can contain a mix of SQL statements and meta-commands.  
  
**-echo**  
Print commands before execution.  
  
**-[no]header**  
Turn headers on or off.  
  
**-bail**  
Stop after hitting an error.  
  
**-interactive**  
Force interactive I/O.  
  
**-batch**  
Force batch I/O.  
  
**-column**  
Query results will be displayed in a table like form, using whitespace characters to separate the columns and align the output.

CS50

Operators

Overview

You'll mostly familiar with **operators** from math. In a general means address. The variable means and values are... **Arithmetic Operators**

**Arithmetic Operators**

**Arithmetic operators** perform mathematical functions on numbers. These operators accept two numbers (the **operands**) separated by an operator. The operators are: **+** (addition), **-** (subtraction), **\*** (multiplication), **/** (division), **%** (modulus), **++** (increment), and **--** (decrement).

**+** Add:  $x + y$  results in the sum of  $x$  and  $y$ .  
**-** Subtract:  $x - y$  results in the difference of  $x$  and  $y$ .  
**\*** Multiply:  $x * y$  results in the product of  $x$  and  $y$ .  
**/** Divide:  $x / y$  results in the quotient of  $x$  and  $y$ .  
**%** Modulus:  $x \% y$  results in the remainder of  $x$  divided by  $y$ .  
**++** Increment:  $x++$  increments  $x$  by 1.  
**--** Decrement:  $x--$  decrements  $x$  by 1.

Assignment Operators

**Assignment Operators**

**Assignment operators** are used to assign values to variables. The most common assignment operator is **=** (assignment). Other assignment operators include **+=** (addition assignment), **-=** (subtraction assignment), **\*=** (multiplication assignment), **/=** (division assignment), and **%=** (modulus assignment).

**=** Assign:  $x = y$  assigns the value of  $y$  to  $x$ .  
**+=** Add:  $x += y$  adds  $y$  to  $x$ .  
**-=** Subtract:  $x -= y$  subtracts  $y$  from  $x$ .  
**\*=** Multiply:  $x *= y$  multiplies  $x$  by  $y$ .  
**/=** Divide:  $x /= y$  divides  $x$  by  $y$ .  
**%=** Modulus:  $x %= y$  sets  $x$  to the remainder of  $x$  divided by  $y$ .

# QUIZ REVIEW

# NOTES ON THE QUIZ

- The Quiz will be released at noon this Saturday and due by **noon on Thursday 11/15**
- The Quiz takes most people 6-10 hours
  - It can be helpful to split up your working time into different large blocks
- It is very *conceptually-focused*—Unlike problem sets, you're not trying to write code or implement an algorithm
  - The focus is on the broad concepts of the class and what we've learned so far

# TIPS FOR THE QUIZ

- Review lecture notes, my slides, reference sheets, and other conceptually-focused materials
- We've spent a lot of time discussing context and *why* in section—Apply that mindset to the quiz
  - Ask: Why do we use a certain algorithm? What role does this play in my code? Is this syntax or convention?
- Work out the Quiz problems on paper and type them up after the fact
  - Remember our whiteboarding strategy
  - If you're trying to come up with an algorithm, run through examples, **edge cases**, etc.

# STRATEGIES

- **Between now and Saturday:**
  - Locate all the content materials you have and organize them
  - Review [About the Quiz](#) on CS50's webpage
  - Check out released problems (linked above)
- **Between Saturday and Tuesday:**
  - Try to complete an entire attempt of the Quiz—Skip problems if you get stuck and give yourself a lot of time to think through them
- **Between Tuesday and Thursday:**
  - Review your answers, check for mistakes/edge cases, and perfect your wording
  - Submit!

# QUIZ REVIEW

We'll now whatever questions you might have  
and spend time reviewing together.

**REFLECTIONS**

# GOALS OF THE COURSE

1. Learn to think computationally and algorithmically.

# GOALS OF THE COURSE

1. Learn to think computationally and algorithmically.
2. Improve your problem-solving skills—this will help you in every other course and in real-life too!

# GOALS OF THE COURSE

1. Learn to think computationally and algorithmically.
2. Improve your problem-solving skills—this will help you in every other course and in real-life too!
3. Gain practical programming skills in a plethora of languages (C, Python, JavaScript, etc.)

# GOALS OF THE COURSE

1. Learn to think computationally and algorithmically.
2. Improve your problem-solving skills—this will help you in every other course and in real-life too!
3. Gain practical programming skills in a plethora of languages (C, Python, JavaScript, etc.)
4. Familiarize yourself with best practices for software design.

# GOALS OF THE COURSE

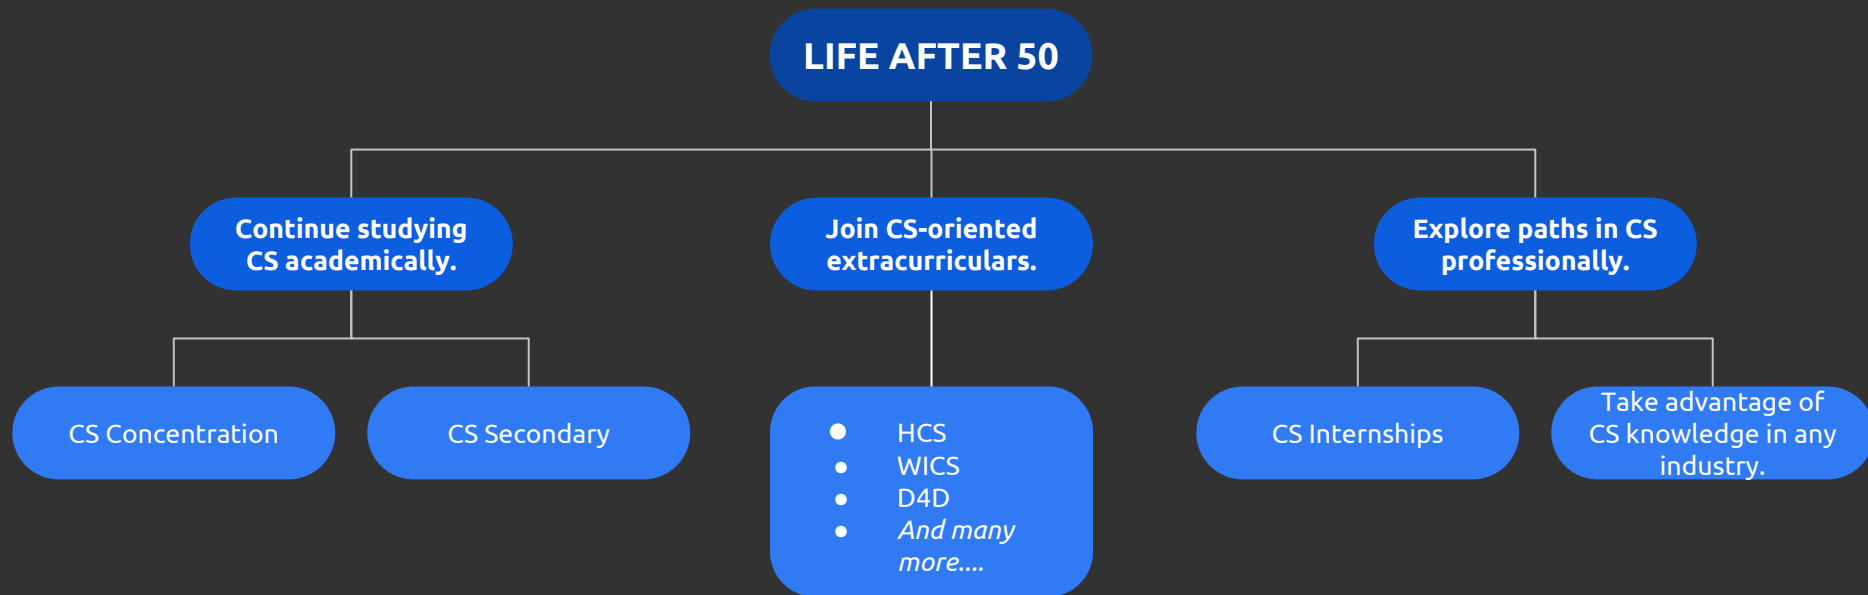

1. Learn to think computationally and algorithmically.
2. Improve your problem-solving skills—this will help you in every other course and in real-life too!
3. Gain practical programming skills in a plethora of languages (C, Python, JavaScript, etc.)
4. Familiarize yourself with best practices for software design.
5. Build a community with your peers that will stay with you after this course.

**LIFE AFTER 50**

# WHAT REMAINS:

1. Finish C\$50 **F**inance.
2. Complete the Quiz.
3. Complete your Final Project.
4. Attend the CS50 Fair.
5. Enjoy life after 50!

# NEXT STEPS

# NEXT STEPS—EXPLORING CS ACADEMICALLY

All the info you need and more at:

<https://harvardcs.info/index.html>

# NEXT STEPS—CS CONCENTRATION

Category	Number of required courses	Basic Concentration	Honors Concentration
<b>Mathematics</b>	(Total: 2-4 courses)		
Preparation	0-2	Math 1a and/or Math 1b as needed	same
Linear algebra	1	Math 21b/22b/23a/25a/55a	same
Probability/statistics or Multivariable calculus	1	Stat 110 or Math 21a/22a/23b/23c/25b/55b	same
<b>Basic Software</b>	2	2 out of CS 50, CS 51, CS 61	same
<b>Theory</b>	2	CS 121 + CS 124 or other theory course	same
<b>Technical Electives</b>	4 (6 for honors)	4 courses from list that includes CS 20, CS 51-299, STAT 110, AM 106, AM 107, and others. (at most one CS 91r)	6 courses from same list
<b>Breadth Requirement</b>		2 tech electives must be CS with penultimate digit 3-8	3 tech electives must be CS with penultimate digit 3-8
<b>Tutorial</b>		At most one CS91r is tech elective	same
<b>Thesis</b>		Not required	Not required but recommended

# NEXT STEPS—CS SECONDARY

- Requires four courses with numbers 100 or greater—CS50, CS51, and CS61 also count
- **You're ¼ the way there!**

# NEXT STEPS—SPRING 2019

Consider taking **CS51: Introduction to Computer Science II**

# SEMINAR—AN INTRODUCTION TO JQUERY

Time: Thursday, October 8, 4:30-5:30pm

Location: 67 Mt. Auburn St., the HSA building on the 4th floor

*jQuery is helpful to solve the problem of writing client-side JavaScript code for web applications. It simplifies cumbersome JS, adds a variety of powerful dynamic features (e.g. animations), and is an industry-standard tool.*

The jQuery logo, featuring the word "jQuery" in a stylized, bold, italicized font. The "j" is lowercase and the "Query" is uppercase.

# A FINAL NOTE

**It's been a privilege to be your Teaching Fellow this semester.**

I am a resource for you all now and *after* CS50:

- [wadesilvestro@college.harvard.edu](mailto:wadesilvestro@college.harvard.edu)
- (863) 666-4003
- GET /wes HTTP/1.1

**THANKS FOR A  
SPECTACULAR SECTION  
EXPERIENCE!**
